PATIENT INSTRUCTIONS AFTER CROWN OR BRIDGE TREATMENT

- After your first appointment for crown or bridge treatment, a temporary crown is usually placed on the tooth or teeth involved. The temporary crown protects while the laboratory custom crown is being produced. Temporary cement is used so that the crown can be easily removed at your next appointment.
- If your temporary crown comes off before your next appointment, place the temporary back on your tooth and call our office.
- With your temporary crown and with your permanent crown, you may experience some discomfort due to irritation of the area during the treatment procedures. You may also notice sensitivity on cold or pressure.
- Your new permanent crown will be shaped and shaded especially to your teeth in color and fit. The temporary crown is made to serve you temporarily, so its color and fit are not custom-matched to your teeth.
- After your new permanent crown is in place you may need a few days to adjust to it. If you feel the bite is not correctly balanced, please call for an appointment and we can adjust it.
- Care for your new crown with proper brushing and flossing. It is especially important to keep the edge of the crown clean at the gum line.
- Other instructions:

Please follow these home care instructions carefully and call our office if you have any questions or concerns.
